Aluminum Nitride is mostly known for its property to be used for material that needs high thermal conductivity. It is one of the best options to be used for electric material components since it has supports durability and stability at a high temperature. Through physical vapor deposition, our high purity aluminum nitride sputtering target will perfectly layer a solid substrate up to grain sizes. Aluminum nitride sputtering target is the best coating to be used for thin-film transistors for monitor devices (e.g. TV, LCD, phone cell, etc.). Aside from being used for monitor devices, aluminum nitride sputtering targets can also be used to coat lighting components and mirrors.
