In 2024, global Aluminum Pigments for Plastic Applications production reached approximately 18796 ton, with an average global market price of around K US$ 26 per ton. Aluminum pigments for plastic applications are high-performance metallic effect pigments specifically designed for various plastic processing techniques (e.g., injection molding, extrusion, blow molding). They are manufactured from high-purity aluminum into platelet particles and undergo specialized surface treatment with organic (e.g., stearic acid) or inorganic (e.g., silica) agents to ensure excellent compatibility with polymer resins. Their core value lies in maintaining chemical stability under high-temperature, high-shear processing conditions, dispersing uniformly within the plastic matrix to impart brilliant metallic luster, hiding power, and angle-dependent color shift (flop effect) to the final product, while preventing issues like oxidation, darkening, or gas formation due to the reactivity of aluminum.

United States market for Aluminum Pigments for Plastic Applications is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
