Aluminum plate block ice machine is an ice-making equipment that uses aluminum evaporation plate as heat exchange element, and freezes water into block ice through direct low-temperature refrigerant contact and heat exchange with water. It has the advantages of high heat exchange efficiency, fast ice making speed, and low energy consumption. It is widely used in aquatic preservation, food processing, chemical cold storage and other fields. Compared with traditional salt water ice machines, aluminum plate block ice machines are more compact, more environmentally friendly, and easier to operate.

United States market for Aluminum Plate Block Ice Machine is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
