Aluminum Sectional Door is a type of overhead door composed of horizontally hinged aluminum panels that open vertically and rest parallel to the ceiling when fully open. These doors are engineered for both residential and commercial use, offering a combination of strength, lightweight structure, and modern aesthetics. Constructed primarily from high-grade aluminum alloys, the panels are often integrated with glass or polycarbonate windows to enhance natural lighting while maintaining security. The sectional design allows for smooth, quiet operation and space-efficient functionality, making it ideal for environments where overhead clearance and floor space are limited. These doors are widely utilized in commercial garages, automotive showrooms, loading bays, fire stations, and even contemporary residential homes. Depending on the application, the doors can be customized in terms of panel configuration, glazing options, finish colors, and insulation levels. Their durable design and architectural appeal make aluminum sectional doors a preferred choice for facilities seeking both functional performance and visual appeal.
