Aluminum silicon carbide is a composite material of metal and ceramic. AlSiC (aluminum silicon carbide) is the abbreviation of aluminum-based silicon carbide ceramic particle reinforced composite material. The properties of AlSiC mainly depend on the volume fraction (content), distribution and particle size of SiC, as well as the Al alloy composition. According to the ratio of the two phases or the heat treatment state of the composite material, the thermophysical and mechanical properties of the material can be designed to meet various performance requirements of chip packaging. Aluminum silicon carbide composites have excellent mechanical and physical properties, and are widely used in aerospace and military, rail transit and automotive, electronics, military and other fields.

Global key players of aluminum silicon carbide material include Denka, CPS Technologies, Materion, Sumitomo Electric, Ametek Specially Metal Products, etc. The top five players hold a share about 76%. Japan is the largest producer, has a share about 56%, followed by North America and China, with share 26% and 10%, respectively.
