The global Aluminum-silicon Coated Steel market size is predicted to grow from US$ 4966 million in 2025 to US$ 7620 million in 2032; it is expected to grow at a CAGR of 6.4% from 2026 to 2032.

In 2024, global Aluminum-silicon Coated Steel production reached approximately 4340 k tons, with an average global market price of around US$1120 per ton. Aluminum-silicon coated steel is a type of steel that has been coated with an aluminum-silicon alloy, typically containing 5% to 11% silicon, through a hot-dip galvanizing process. This coating provides excellent high-temperature resistance, oxidation resistance, and corrosion resistance, making it suitable for applications in high-temperature environments. Compared to traditional galvanized steel, aluminum-silicon coated steel performs better at elevated temperatures, withstanding temperatures up to 550°C without significant changes. Common applications include automotive exhaust systems, household appliances such as ovens and water heaters, and industrial equipment. The unique combination of properties possessed by neither steel alone nor aluminum alone makes aluminum-silicon coated steel a preferred material in various industries requiring durability and high performance.

The upstream of aluminum-silicon coated steel mainly includes basic raw materials such as iron ore, bauxite, and coking coal, as well as aluminum and silicon alloys used for coating. The downstream is mainly used in industries such as automobile manufacturing and home appliances.

United States market for Aluminum-silicon Coated Steel is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
