The global Always On Video(AOV) Camera market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

AOV (Always On Video) technology is a low-power technology that always keeps video recording. Traditional low-power cameras generally use the method of adding PIR to work with the camera to achieve low-power standby in an unmanned state, and full-frame rate recording in a manned state, supporting real-time video stream preview. The camera will be awakened again after the PIR is triggered. There is a time difference in this process. When using low-power home cameras, we should be able to clearly feel that after the camera is awakened, there will be a buffer time between reconnecting to the real-time video stream, and the experience is not smooth enough. In contrast, AOV cameras can well fill the pain points of missed alarms and false alarms, and at the same time can achieve better optimization in other aspects such as product form and performance.
