The research report highlights the growth potential of the global AMB Ceramic Substrate market. AMB Ceramic Substrate are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of AMB Ceramic Substrate. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the AMB Ceramic Substrate market.

Active Metal Brazing (AMB) is the latest developments in ceramic substrates and offers the ability to produce Heavy Copper with a AlN (Aluminium Nitride) or SiN (Silicon Nitride). The normal metallisation process is not used as AMB involves brazing pure copper on the ceramic in a high temperature vacuum brazing process. As well as offering a high reliability substrate with unique heat dissipation. The brazing technology also enables double sided copper weights of up to 800µm on thin ceramic substrates of just 0.25mm.

The key global manufacturers of ABM ceramic substrates are Rogers Corporation, Heraeus Electronics, Toshiba Materials, Denka, KCC, Ferrotrc, and BYD. The top three manufacturers together account for 80% of the market share, with Denka being the

largest producer with a 37% market share. The global origins are mainly located in Europe, Japan, China, Korea, etc., with Japan being the largest production region with a share of 40%. In terms of product categories, Si₃N₄ AMB substrates have a higher market share of more than 90%, while AlN AMB substrates has a lower share. In terms of its application areas, the automotive industry is its first oldest far, occupying about 70% of the market share; followed by traction & railway and new energy & power grid areas.
