Gross Profit Margin: 35%. An ambient light meter is a device used to measure the intensity of light in a specific environment. The industry chain of ambient light meters begins with raw material and component suppliers providing sensors, electronics, and mechanical parts, which are then assembled and calibrated by device manufacturers into functional meters. These products are distributed through B2B and B2C channels, reaching end users such as photographers, architects, workplace inspectors, and horticulture specialists, while aftermarket services like calibration, maintenance, and software updates support long-term device performance. Ambient light meters are indispensable tools for anyone who needs precise lighting measurements—whether for photography, workplace safety, or architectural design.
