Amici roof prisms are optical components used in binoculars, telescopes, and other optical instruments. They consist of two right-angle prisms that are joined together at their hypotenuses with a specific arrangement to form a roof-like structure. This design allows for the reflection and redirection of light through a total of four reflections inside the prisms. Amici roof prisms are commonly employed to produce an upright and non-reversed image in optical systems where compactness and image quality are essential, such as in binoculars used for terrestrial viewing.
