The global Amino-2-propanol market size is predicted to grow from US\$ 141 million in 2025 to US\$ 186 million in 2032; it is expected to grow at a CAGR of 4.1% from 2026 to 2032.

Amino-2-propanol, (Mono-isopropanolamine, MIPA), is an important organic compound belonging to the alkanolamine class, typically a colorless to pale yellow transparent liquid. It possesses both alcohol and amine chemical properties and is widely used in surfactants, metalworking fluids, and personal care products as a neutralizing agent, emulsifier, or raw material.

Its upstream production is highly dependent on the petrochemical industry, with propylene oxide (PO) and liquid ammonia as the core raw materials. Fluctuations in the production capacity and price trends of these two materials directly determine the production cost and operating rate of MIPA.

In 2025, global sales are projected to be approximately 80,000 tons, with an average market price of approximately US\$1797 per ton. The industry's gross profit margin is in the range of 15%-30%.

Monoisopropanolamine (MIPA) is a typical hydroxyl-containing amine (amino alcohol) intermediate/functional additive. It provides alkalinity and buffering, enabling the neutralization of acidic components and pH adjustment, while also serving multiple roles such as emulsification/solubilization, stabilization, and as a chemical intermediate. Its applications span across various fields.

In cosmetic formulations, MIPA acts as an efficient and gentle pH adjuster and emulsifier, perfectly aligning with modern consumers' demand for 'clean label' and low-irritation products.

Furthermore, the diverse demands of the industrial sector provide strong impetus for its use as a highly efficient and environmentally friendly cement grinding aid, significantly improving cement strength; and as an emulsifier and corrosion inhibitor in cutting fluids and grinding fluids, exhibiting excellent rust prevention and lubrication properties. Due to its combined alkalinity and hygroscopic properties, monoisopropanolamine is particularly suitable for cleaning and surface treatment processes requiring high penetration and good solubility.
