With growing demand in downstream market, the Amino Acid Analyzers is forecast to a readjusted size of US\$ 91 million by 2030 with a CAGR of 1.1% during review period.

The research report highlights the growth potential of the global Amino Acid Analyzers market. Amino Acid Analyzers are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Amino Acid Analyzers. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Amino Acid Analyzers market.

Amino Acid Analyzer uses classic cation exchange chromatography and ninhydrin post-column derivatization to analyze the protein hydrolysate and the content of various free amino acids. The basic structure of the instrument is similar to ordinary HPLC, but the details are optimized for amino acid analysis.

Usually subdivided into two systems: proteolysis analysis system (sodium salt system) and free amino acid analysis system (lithium salt system), using different concentrations and pH values of sodium citrate or lithium citrate for gradient elution. Among them, the sodium salt system can analyze up to about 25 amino acids at a time, which is faster and has a good baseline flatness; the lithium salt system can analyze up to about 50 amino acids at a time, which is slower, and the baseline is generally not as good as the

sodium salt system.

Japan is the largest producer of Amino Acid Analyzers, with a market share nearly 55%. It was followed by Europe with 30%. Hitachi High-Technologies, Sykam and Biochrom are the top 3 manufacturers of industry, and they had about 70% combined market share.
