The global Amino Acid Biostimulant market size is predicted to grow from US\$ 1435 million in 2025 to US\$ 2681 million in 2032; it is expected to grow at a CAGR of 9.5% from 2026 to 2032.

Amino acid biostimulants refer to a class of amino acid-based plant growth promoters. These biostimulants are usually composed of natural or synthetic amino acids and can promote plant growth and development through a variety of mechanisms. They can enhance plant stress resistance, improve nutrient absorption efficiency, promote root development, improve fruit quality, etc. Amino acids play an important role in plants, including participating in protein synthesis, regulating metabolic processes, and promoting the synthesis of growth hormones. The use of amino acid biostimulants can increase plant growth rate, enhance resistance to diseases and pests, and to a certain extent improve the plant's ability to adapt to environmental stress (such as drought, high temperature, etc.).

United States market for Amino Acid Biostimulant is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
