Amino Acid Microcapsule refers to micro-scale capsules formed by encapsulating amino acid active ingredients (such as lysine, leucine, tryptophan, arginine, etc.) within wall materials (such as gelatin, gum arabic, modified starch, lipids, or polymer materials) using microencapsulation technology. The purpose is to improve stability, mask taste, enable controlled release, and enhance processing performance and bioavailability in food, dietary supplements, and medical nutrition products. This technology is widely used in functional foods, sports nutrition, FSMP, and fortified nutrition products.

Upstream includes amino acid raw material manufacturers (such as lysine, leucine, valine, arginine, etc.), wall material suppliers (gelatin, gum arabic, modified starch, maltodextrin, lipid materials), and microencapsulation equipment suppliers (such as spray drying equipment and emulsification equipment). Midstream consists of amino acid microcapsule manufacturers. Downstream industries include food and beverage companies, dietary supplement companies, infant nutrition companies, sports nutrition companies, and medical nutrition companies.
