The global Amino Dicarboxylic Acid market size is predicted to grow from US\$ 896 million in 2025 to US\$ 1384 million in 2032; it is expected to grow at a CAGR of 6.4% from 2026 to 2032.

Amino Dicarboxylic Acid refers to a class of organic compounds that contain two carboxyl groups (-COOH) and one or more amino groups (-NH_2) within the same molecule, with common examples including aspartic acid and glutamic acid; these molecules are key intermediates in biochemistry, polymer production (e.g., polyamides), pharmaceuticals, and food additives. The supply chain starts upstream with petrochemical feedstocks (e.g., maleic anhydride, acrylonitrile) or bio-based raw materials (e.g., glucose, sugars, fermentation substrates), followed by chemical synthesis routes (amination, hydrolysis) or biotechnological fermentation processes using engineered microorganisms to produce the amino dicarboxylic acids. Midstream involves purification (crystallization, ion exchange), concentration, and drying, often requiring high-purity control for food-grade or pharma-grade products. Downstream, these compounds are used in food and feed additives (flavor enhancers, nutrition), biodegradable polymers, resins, coatings, pharmaceuticals, and personal care formulations, with distribution handled by chemical suppliers and specialty ingredient distributors serving industries such as agriculture, healthcare, and advanced materials. In 2025, global Amino Dicarboxylic Acid output was about 500,000 tons with 650,000 tons of capacity, average prices of USD 1,500-4,000 per ton, and gross margins around 24%.
