The global Aminopropanediol (APD) market size is predicted to grow from US\$ 73.4 million in 2024 to US\$ 103 million in 2030; it is expected to grow at a CAGR of 5.8% from 2024 to 2030.

Aminopropanediol (APD), also known as 3-Amino-1,2-Propanediol, is a clear liquid with the molecular formula $C_3H_9NO_2$. It is a key intermediate in the production of non-ionic contrast agents, such as iohexol and ioversol, used in medical imaging. Additionally, APD serves as an intermediate in pesticide synthesis. The compound is produced by reacting 3-chloro-1,2-propanediol (CPD) with ammonia in a sodium hydroxide alkaline environment, followed by a series of purification steps. APD is valued for its role in both pharmaceutical and agricultural industries.

The market for Aminopropanediol (APD) is currently experiencing steady growth, driven by the increasing global demand for non-ionic contrast agents such as iohexol and iodixanol in medical imaging. The rising adoption of advanced diagnostic procedures, especially in developed countries and emerging markets, has significantly boosted the need for APD. Additionally, its application as an intermediate in pesticide synthesis further broadens its usage in the agricultural sector.

In the future, the APD market is expected to expand further, propelled by advancements in medical imaging technology and growing demand from emerging economies. Additionally, the focus on environmental sustainability and green chemistry will drive innovations in production processes, enhancing efficiency and reducing costs. However, the market faces challenges such as raw material price volatility, the complexity of

manufacturing processes, and increasingly stringent environmental regulations. With continued technological innovation and policy support, the APD market is poised for sustainable growth.
