## Abstracts

The global Ammonia Cracking Non-precious Metal Catalysts market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Hydrogen energy utilisation needs to address three issues: hydrogen production, storage and transport, and application, of which hydrogen storage and transport is the key to hydrogen energy application. Among various high-density hydrogen storage media (e.g., methane, methanol), ammonia (NH<sub>3</sub>) not only has a high bulk density for hydrogen storage, but also has zero CO<sub>x</sub> (CO<sub>2</sub>, CO) emission during H<sub>2</sub> production, making it an ideal candidate for building carbon-free hydrogen systems. However, the catalysts required for H<sub>2</sub> production from NH<sub>3</sub> cracking often contain precious metals, which limit their application due to their high price and low reserves.

Global Methanol Synthesis Catalysts key players include Johnson Matthey, Clariant, BASF, Haldor Topsoe, Haohua Chemical Science&Technology etc. Global top five manufacturers hold a share over 50%. Asia-Pacific is the largest market, with a share about 65%, followed by Middle East and Africa. In terms of reaction condition, Medium Pressure is the largest segment, with a share about 37%. And in terms of synthesis process, the largest application is Coke Oven Gas, followed by Coal and Natural Gas.
