The global Ammonia TDLAS Analyzer market size is predicted to grow from US\$ 157 million in 2025 to US\$ 238 million in 2032; it is expected to grow at a CAGR of 6.2% from 2026 to 2032.

The ammonia TDLAS analyzer is an instrument based on tunable diode laser absorption spectroscopy technology, used for highly selective, rapid, and online measurement of ammonia concentration in gases. Demand primarily stems from increasingly stringent global industrial emission regulations (especially controls on nitrogen oxides and ammonia escape) and the urgent need for refined industrial process management. Its core application is monitoring ammonia escape concentration after denitrification facilities in coal-fired power plants, cement plants, and chemical plants to achieve environmental compliance, optimize ammonia injection to reduce costs, and prevent equipment corrosion. Its upstream supply chain focuses on high-end laser devices and optical components (such as tunable diode lasers, quantum cascade lasers, infrared detectors, and precision optical lenses), special materials and electronic chips (laser drive and control circuits, corrosion-resistant probe materials), and signal processing and algorithm software. Downstream services directly serve emission-producing companies in the power, cement, and chemical industries, as well as environmental engineering companies and system integrators, extending to ongoing operation and maintenance services, data monitoring platforms, and environmental consulting. In 2025, the production volume of ammonia TDLAS analyzers is expected to be approximately 8,000 units, with an average price of approximately US\$20,000 per unit, a gross profit margin of approximately 45%, and a single-line capacity of 200 units per year.
