The global Ammonia-to-hydrogen Power Station market size is predicted to grow from US\$ 372 million in 2025 to US\$ 2533 million in 2032; it is expected to grow at a CAGR of 32.2% from 2026 to 2032.

Ammonia-to-Hydrogen Power Station is a facility designed to convert ammonia (NH₃) into hydrogen (H₂) through catalytic cracking, which can then be used to generate electricity, either through hydrogen fuel cells or combustion in gas turbines. This concept is gaining attention as a means of utilizing ammonia as an energy carrier for hydrogen in the emerging hydrogen economy, providing a cleaner alternative to fossil fuels for power generation. In 2024, the production volume of ammonia-to-hydrogen power stations was 82,631 units, with an average price of \$3,800.

With the urgent global demand for low- and zero-carbon energy solutions, the ammonia-to-hydrogen power station market is facing significant growth opportunities. This technology uses ammonia as a hydrogen carrier, solving the challenges of hydrogen storage and transport. This allows for safe and efficient long-distance transport, with subsequent conversion into clean electricity when needed.
