The global Ammonium Petroleum Sulfonate market size is predicted to grow from US\$ 437 million in 2025 to US\$ 626 million in 2032; it is expected to grow at a CAGR of 5.3% from 2026 to 2032.

Ammonium Petroleum Sulfonate is a water-soluble anionic surfactant produced by neutralizing petroleum sulfonic acids with ammonia or ammonium hydroxide. It is widely used as an emulsifier, wetting agent, dispersant, corrosion inhibitor, and enhanced oil recovery (EOR) chemical in oilfield operations, metalworking fluids, industrial cleaners, textile processing, and specialty chemical formulations. The supply chain begins with upstream petroleum feedstocks such as vacuum gas oil, lubricating oil fractions, or alkylated aromatic hydrocarbons derived from crude oil refining. These hydrocarbon streams undergo sulfonation using sulfur trioxide, oleum, or sulfuric acid to produce petroleum sulfonic acids, which are subsequently neutralized with ammonia to form ammonium petroleum sulfonate. Midstream activities include purification, concentration adjustment, blending, quality control, and packaging. Downstream distribution is handled through oilfield chemical suppliers, surfactant manufacturers, lubricant additive companies, and specialty chemical distributors, serving end users in petroleum extraction, industrial cleaning, metal processing, textile manufacturing, agriculture, and various industrial water-treatment applications. In 2025, global Ammonium Petroleum Sulfonate output was about 320,000 tons with 400,000 tons of capacity, average prices of USD 1,200-3,500 per ton, and gross margins around 25%.
