The global Amorphous Boron Powder market size is predicted to grow from US\$ 50.96 million in 2025 to US\$ 67.38 million in 2032; it is expected to grow at a CAGR of 4.1% from 2026 to 2032.

Amorphous boron is also called amorphous elemental boron, monolithic boron. It is a full-color powder or gray shiny crystal with more lively chemical properties. Amorphous boron powder refers to a type of boron powder that lacks a long-range ordered crystalline structure. It is a form of boron in a non-crystalline or amorphous state. Typically, amorphous boron powder appears as a fine, dark brown or black powder. It is usually produced through chemical reduction methods, such as the reduction of boron oxides. This powder has unique physical and chemical properties. It has a relatively high chemical reactivity and can be used in various fields like pyrotechnics, as a reducing agent in certain chemical reactions, and in the preparation of some advanced materials due to its special characteristics.

Amorphous boron powder market key players include H?gan?s, SB Boron, PavTec, Dandong Chemical Engineering Institute, and Yingkou Liaobin Fine Chemical. Europe, United States and China are major manufacturing bases.

Market opportunities are driven by its use in aerospace for high - performance composites and rocket propellants, in energy storage to improve battery performance, and in emerging 3D printing and nanotechnology. However, challenges exist, such as high production costs due to complex processes, lack of standardization making product comparison difficult, and environmental concerns from production pollutants. Demand trends show a rise in need for high - purity products for high - tech applications, a push for sustainable production methods, and an increasing demand for custom - tailored

products to meet specific industry requirements.
