Amorphous metal is a solid metallic material with high magnetic conductivity that provides energy saving performance. The metal atoms are disordered and arranged in non-crystal way. Amorphous metal is different from conventional steel because is easier to be magnetized and de-magnetized. Amorphous metal sheet is 0.02 mm thick, which is about 1/10 of conventional silicon steel. An amorphous core transformer is a highly efficient electrical transformer, which has a magnetic core comprised of ferromagnetic amorphous metal alloyed with a glass former. This ribbon of steel is wound to form the transformers core. The materials used in amorphous core transformers have high magnetic susceptibility, low coercivity and high electrical resistance.

Global Amorphous Core Transformers key players include Hitachi Industrial Equipment Systems, ABB, Siemens, etc. Global top three manufacturers hold a share over 20%.

Asia-Pacific is the largest market, with a share over 45%, followed by Americas, and Europe, both have a share about 40 percent.

In terms of product, Oil-Immersed the largest segment, with a share over 85%. And in terms of application, the largest application is Utility Companies, followed by Building,

Factory, etc.
