The global Amorphous Magnetic Shielding Sheet market size is predicted to grow from US\$ 90.61 million in 2025 to US\$ 121 million in 2032; it is expected to grow at a CAGR of 4.4% from 2026 to 2032.

Magnetic shielding sheets are classified as amorphous shielding sheets and nanocrystalline shielding sheets according to different kinds of soft magnetic materials. Magnetic shielding sheets made of single-layer or multi-layer high-quality amorphous or nanocrystalline ribbon offer high permeability and low core losses. It can effectively reduce the EMI of magnetic field to the surroundings. It is widely used in aerospace, automotive, communications and other electronic equipment as EMI resistance, electromagnetic screen and wireless charging.

Amorphous nanocrystalline soft magnetic materials are known as the new green energy-saving materials in the 21st century due to their excellent properties such as high permeability, high saturation magnetic induction strength, low loss, good thermal stability, etc. Coupled with their simple process and low cost, they are now widely used in many industries such as communications, industry, new energy, power electronics, etc. Chinese amorphous nanocrystalline soft magnetic material enterprises have become the main force in the production and manufacture of amorphous nanocrystalline products. At present, China's amorphous nanocrystalline strip technology is more mature, can be achieved through the melt state of the rapid cooling method of ultra-thin strip mass production, to meet the demand for applications in the field of soft magnetic. It is reported that more and more enterprises in China choose to amorphous nanocrystalline materials as their main products, to promote high-frequency electronic products, miniaturization and environmental protection and energy saving, the development of China's electronics manufacturing industry has played an important

role.
