The global Amorphous Metal & Nanocrystalline Cores market size is predicted to grow from US$ 779 million in 2025 to US$ 1106 million in 2031; it is expected to grow at a CAGR of 6.0% from 2025 to 2031.

Amorphous cores and nanocrystalline cores are both materials used in magnetic applications, mainly used to manufacture electromagnetic components such as transformers, inductors, and magnetic isolators. They have unique advantages in performance and are widely used in energy, electronics, communications and other fields. Amorphous cores are made of materials with disordered atomic arrangements, which are not arranged in a regular lattice like crystals. Amorphous materials are usually formed by rapidly cooling molten metals (such as iron-based alloys). Nanocrystalline cores are materials composed of fine nanoscale grains, which are usually about a few nanometers in size. Nanocrystalline materials are usually obtained by heat treatment or controlled cooling, which makes their grain size extremely small, thus having better magnetic properties.

United States market for Amorphous Metal & Nanocrystalline Cores is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
