The global Amorphous Metal Sheets market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Amorphous Metal Sheet is a new soft magnetic material. It is produced through the advanced technology of rapid solidification of molten metal at a cooling rate of about a million $^{\circ}\text{C}/\text{sec}$. During this process the metal is rapidly quenched as a form of ribbon with 25-35 μm thickness, and the micro-structure of the alloy is the amorphous due to the high quenching rate. Amorphous Metal Ribbon has many advantages, such as high permeability, high saturate induction, high electrical resistivity, high density, low core loss and good stability. It can replace the materials of silicon steel, permalloy and ferrite. It is widely used in electronics products that high accuracy and good stability are the most required.

Global key players of Amorphous Metal Ribbons include Qingdao Yunlu, Proterial, Ltd. (Formerly Hitachi Metals), Advanced Technology, etc. The top three players hold a share about 79%. Asia is the largest market, and has a share about 65%, followed by North America and Europe with share 19% and 12%, separately. In terms of product type, Above 100 mm is the largest segment, occupied for a share of 76%. In terms of application, Transformers has a share about 65 percent.
