## Abstracts

The global Amorphous and Nanocrystalline Soft Magnetic Materials market size is predicted to grow from US\$ 860 million in 2025 to US\$ 1600 million in 2031; it is expected to grow at a CAGR of 10.9% from 2025 to 2031.

Amorphous Ribbon is a new soft magnetic material. It is produced through the advanced technology of rapid solidification of molten metal at a cooling rate of about a million  $^{\circ}\text{C}/\text{sec}$ . During this process the metal is rapidly quenched as a form of ribbon with 25-35  $\mu\text{m}$  thickness, and the micro-structure of the alloy is the amorphous due to the high quenching rate. Nanocrystalline alloys are materials based on Fe, Si and B as well as Nb and Cu. They are produced in thin ribbons by rapid solidification technology, initially amorphous, and then crystallized in heat treatment at about 500-600  $^{\circ}\text{C}$ . This results in the microstructure of very fine grains with a grain size of 10 nanometers - hence known as nanocrystals. These nanocrystalline alloys have low magnetic anisotropy and low magnetostriction, and have high magnetic flux density BS and good thermal stability.
