The global Amorphous Ribbons market size is predicted to grow from US\$ 409 million in 2025 to US\$ 658 million in 2031; it is expected to grow at a CAGR of 8.2% from 2025 to 2031.

Amorphous Ribbon is a new soft magnetic material. It is produced through the advanced technology of rapid solidification of molten metal at a cooling rate of about a million $^{\circ}\text{C}/\text{sec}$. During this process the metal is rapidly quenched as a form of ribbon with 25-35 μm thickness, and the micro-structure of the alloy is the amorphous due to the high quenching rate.

Amorphous Ribbon has many advantages, such as high permeability, high saturation induction, high electrical resistivity, high density, low core loss and good stability. It can replace the materials of silicon steel, permalloy and ferrite. It is widely used in electronics products that high accuracy and good stability are the most required.

Global key players of Amorphous Ribbons include Qingdao Yunlu, Proterial, Ltd. and Advanced Technology, etc. The top three players hold a share over 70%. Asia-Pacific

is the largest market, has a share about 65%. In terms of product type, Above 100 mm is the largest segment, occupied for a share of about 75%, and in terms of application, Transformers has a share about 65 percent.
