Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Amorphous selenium detectors are formed by coating amorphous selenium on a TFT array. In contrast to amorphous silicon detectors, it does not require a scintillation crystal to convert X-rays into visible light. Electron-hole pairs are created when X-rays strike the amorphous selenium layer. These electrons and holes will move in opposite directions under the action of an external bias field to form a current, and the current is integrated in the TFT to form a stored charge.

The global market for Amorphous Selenium Detector is estimated to increase from US\$ million in 2021 to reach US\$ million by 2028, exhibiting a CAGR of % during 2022-2028. Keeping in mind the uncertainties of COVID-19 and Russia-Ukraine War, we are continuously tracking and evaluating the direct as well as the indirect influence of the pandemic on different end use sectors. These insights are included in the report as a major market contributor.

The APAC Amorphous Selenium Detector market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.

The United States Amorphous Selenium Detector market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.

The Europe Amorphous Selenium Detector market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.

The China Amorphous Selenium Detector market is expected at value of US\$ million in
