Abstracts

According to this study, the global Amplicon Sequencing Service market size will reach US\$ 1258 million by 2031.

Amplicon Sequencing Service is a targeted sequencing method based on next-generation sequencing (NGS) that involves PCR amplification of specific genomic regions using custom-designed primers, followed by library preparation and high-throughput sequencing. It offers high sensitivity, low cost, and scalability, making it ideal for detecting genetic variations in predefined regions. This technique is widely applied in microbial community profiling (e.g., 16S/ITS/18S rRNA sequencing), cancer hotspot mutation analysis, inherited disease variant detection, antimicrobial resistance screening, and CRISPR editing evaluation. Amplicon sequencing plays a vital role in precision medicine, microbial ecology, and agricultural biotechnology, enabling accurate and efficient analysis of genetic diversity and mutation frequency in target regions.
