An anaerobic digester tank is a type of tank used to break down organic waste materials, such as food waste, animal manure, or agricultural residues, into biogas and fertilizer through a process called anaerobic digestion. The tank is typically sealed to create an oxygen-free environment, allowing bacteria to break down the waste. The biogas produced can be used as a renewable energy source, while the fertilizer can be used as a soil amendment. Anaerobic digester tanks are commonly used in agricultural and industrial settings, as well as in decentralized waste management systems.
