Delivery of anaesthesia in order to control the pain while carrying out dental procedure is of utmost importance. Therefore, various new delivery systems for local anaesthesia in dentistry is introduced. Some of these include computer controlled local anaesthetic delivery systems, jet injectors and intra-osseous anaesthesia systems (eg. anaesthesia delivery pens).

Technological advancement that ensures better delivery and reduced pain is the primary factor driving the demand of anaesthetics delivery pens. For instance, SleeperOne anaesthesia pen manufactured by Swallow Dental Supplies Ltd. delivers the anaesthetics into the tissues drop by drop, without pain. It simplifies the delivery anaesthetics into dense tissues without muscular effort. Thus, reducing the post-operative injection pain.

Another factor contributing towards the growth of anaesthetics delivery pens is the increasing incidence of dental diseases and the rise in treatment seeking rate among the population. According to CDC, in 2018, 50 percent of the U.S. population, aged 30 and over had advanced form of periodontal disease, or gum disease.
