Light source controller products occupy an important position in the field of industrial vision, and their main role is to provide intensity controllable and refined lighting effects. Light source controllers can be divided into analog controllers, digital controllers, etc. The analog controller itself does not have specific lighting brightness grading control, but when used, the analog controller itself has short-circuit protection function, so the safety performance of the product can be effectively guaranteed. Secondly, the input

method used by the analog controller is external trigger input. Whenever an external signal is captured and input to the analog controller, the internal light source of the controller will perform stroboscopic lighting actions based on reality. This process also ensures that the service life of the analog controller is generally longer.
