The global Analog Night Vision Observation Device market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Analog night vision observation devices are optoelectronic devices which produce an image quite similar to the one you see with your eyes, just with other colors. Night vision observation devices amplify the rest light in the night with the help of a photocathode and an image intensifier tube, so you get a brighter image for observing at night. These night optical devices operate in the visible and also near-infrared spectrum, while thermal devices operate only in the infrared spectrum.
