Abstracts

The global Analog Output Angle Sensor Chip market size is predicted to grow from US$ 345 million in 2025 to US$ 453 million in 2032; it is expected to grow at a CAGR of 4.1% from 2026 to 2032.

In 2024, global production of analog output angle sensor chips will reach 77.5492 million units, with an average selling price of $4.37 per unit.

An analog output angle sensor chip is a core electronic component in the form of an integrated circuit that directly converts physical angle changes into a continuous analog electrical signal (such as voltage or current). Its key feature is that the output signal is a continuously variable analog quantity, rather than a digital code or digital communication protocol.

The upstream of analog output angle sensor chips consists of core materials and technologies (such as anisotropic magnetoresistance (AMR) materials, tunnel magnetoresistance (TMR) materials, and high-precision semiconductor substrates). The midstream involves the design and manufacturing of analog output angle sensor chips. Representative companies include Gongcaiwang (AM100 agent), VTI (SCA100T series), and TMR technology solution providers. Downstream applications are concentrated in industrial automation, automotive electronics, consumer electronics, and defense.
