Analog Security Solutions refer to traditional security systems that use analog technology to monitor and protect physical spaces. These solutions typically include devices such as analog cameras, video recorders, motion detectors, and alarm systems, which capture, transmit, and store data in analog format. Unlike digital security systems, which convert information into digital signals, analog security systems use continuous signals and are often simpler and more cost-effective. However, they may have limitations in terms of image resolution, scalability, and remote access compared to modern digital systems. Analog security solutions are still widely used in many applications due to their reliability and ease of integration into existing infrastructure.
