The measurement of therapeutic biological molecules requires standards and reagents designed specifically to ensure that systems are fit for purpose. To meet this requirement, high-quality standards, reagents, and sample preparation products specifically designed for critical life science applications requires and they are called analytical standards of life sciences. Analytical Standards are materials containing a known concentration of an analytic. They provide a reference to determine unknown concentrations or to calibrate analytical instruments. The accuracy of a system compared to how close a result comes to the actual value. To ascertain the accuracy of a measurement usually requires calibration of the analytical method with a known analytical standard of life sciences. This measurement is often done with standards of several concentrations to make a calibration or working curve. The analytical life standards are in two forms namely organic and inorganic. Organic, analytical standards used for biochemical reactions.
