The anchor connector is used to connect the chain to the anchor and let the anchor chain slide smoothly through the rod head without any problems or damage to the pulley, so as to minimize the risk of hook and loop entanglement. Finally, the anchor will be automatically straightened and correctly positioned on the ship. Partially anchored connectors have no overhang and are reinforced to provide additional strength and reliability. The anchor connector is made of stainless steel and other metals. It can be rotated or not. The selected size can be used better and longer.
