An anchored floating dock is a type of dock structure that is designed to float on the water surface and is secured in place by anchors. It typically consists of a series of interconnected pontoons or floating platforms that provide a stable working or mooring area. The anchors, which can be of various types such as Danforth anchors, mushroom anchors, or helix anchors, are used to counteract the forces acting on the dock, including wind, waves, and water currents, ensuring the stability and safety of the dock. Anchored floating docks are commonly used in marinas, fishing ports, and industrial waterways for boat mooring, loading and unloading operations, and other water-related activities.
