The global Anchoring Drilling Rig market size is predicted to grow from US\$ 1220 million in 2025 to US\$ 1833 million in 2032; it is expected to grow at a CAGR of 6.0% from 2026 to 2032.

In 2025, global Anchoring Drilling Rig production reached approximately 4.1k units, with an average global market price of around US\$300k per unit.

An anchoring drilling rig is a specialized drilling and anchoring machine used in geotechnical engineering, mining, and tunneling. Its primary purpose is to drill holes into rock or soil and install rock bolts, cable anchors, or grouted anchors to stabilize surrounding ground and prevent collapse or deformation. The rig typically integrates drilling, feed, rotation, optional percussion, grouting, and anchor installation functions, making it essential for roadway support, tunnel primary support, slope stabilization, and underground safety reinforcement.

An anchoring drilling rig sits upstream on high-strength/wear steels and fabrication consumables, hydraulic systems (pumps/valves/cylinders/hoses), power & carrier (diesel/electric, drivetrain, tires/tracks), drilling/bolting components (drifter/rotation unit, booms, drill steels/bits), electrical controls and sensors (PLC/wiring, safety/positioning), and anchoring consumables (rock bolts/cable bolts, resin cartridges or cement grout). Representative upstream suppliers include SSAB (wear/high-strength steel), SKF (bearings), Bosch Rexroth (hydraulics), and Cummins (engines). Midstream OEMs/system integrators include Sandvik, Epiroc, Normet. Downstream use cases are mine roadway support, tunnel/underground bolting, and slope/foundation anchoring—served by miners like Rio Tinto/BHP and contractors like VINCI/STRABAG—typically within a “drill–grout–install bolt/cable–tension/lock” support

workflow.

The annual production capacity of a single-line Anchoring Drilling Rig is approximately 100 units, with a gross profit margin of approximately 25%-45%.
