An anesthetic gas purifier is a medical device used to filter and purify anesthetic gases used in the operating room. During surgery, medical personnel anesthetize the patient with anesthesia gases that are exhausted into the operating room air through the ventilator and breathing circuit. If these gases are not handled properly, they can pose a health hazard to medical personnel and patients.

The anesthetic gas purifier is mainly composed of an oxygen inhaler, an adsorbent, a

filter and an exhaust pipe. The oxygen inhaler purifies the oxygen in the operating room through filters and adsorbents, removes the anesthetic gas and other pollutants, and finally discharges the purified gas through the exhaust pipe. Some high-end anesthetic gas purifiers also have an automatic control system, which can be automatically adjusted according to the gas concentration in the operating room to ensure the safety and reasonableness of the gas concentration in the operating room. The anesthesia gas purifier is one of the necessary equipment in the operating room, which can effectively protect the health and safety of medical personnel and patients.
