The global Angle of Arrival (AOA) Locator Device market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

AOA positioning technology based on the Bluetooth standard is a high-precision positioning technology that uses the angle of arrival method (Angle of Arrival). The basic principle is that the tag transmits a wireless signal to the positioning base station. The antenna array in the positioning base station receives the wireless signal from the same signal source at different points in time. By analyzing the arrival time difference, the tag's azimuth angle and pitch angle to the positioning base station are calculated, and then Cooperate with signal strength estimation to accurately position the target in two dimensions. Although Bluetooth AOA positioning has the characteristics of high accuracy, high concurrency, low power consumption, low cost, and high compatibility, from a technical perspective, it is susceptible to signal reflection interference, antenna array errors, complex environments, and antenna directivity. Disturbance and other effects require more work in the microwave radio frequency and algorithm parts.
