Angle-of-Attack Sensor is a device used to measure the angle between the airflow and the surface of an aircraft (such as the wing or fuselage). It is crucial for the flight control and performance monitoring of aircraft, drones, and other aircraft types. The angle of attack is the angle between the direction of the airflow and the reference plane of the aircraft, which affects lift and drag. The angle of attack sensor monitors the angle of attack, assisting pilots or autonomous systems in making critical flight control decisions, preventing stalls, and optimizing flight performance.
