Angled Grippers are a type of mechanical gripper used in automation and robotics to grasp and manipulate objects. Unlike traditional parallel grippers that move in a straight line, angled grippers have a design where the jaws or gripping surfaces are positioned at an angle relative to the gripper's body or to each other. This angled approach allows them to handle objects with unique shapes or in specific orientations more effectively.

The global Angled Grippers market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
