The global Anhydrous Calcium Sulfate market size is predicted to grow from US\$ 2103 million in 2025 to US\$ 3033 million in 2032; it is expected to grow at a CAGR of 5.4% from 2026 to 2032.

In 2025, global Anhydrous Calcium Sulfate production reached approximately 11,944.44 k tons, with an average global market price of around US\$180 per ton.

The gross profit margin of major companies in the industry is between 20%-35%.

In 2025, the global production capacity of anhydrous calcium sulfate was approximately 15,925.93 k tons.

Anhydrous Calcium Sulfate is an inorganic compound obtained by complete dehydration of calcium sulfate, characterized by low solubility, high thermal stability, and strong moisture-absorbing capability. It is widely used as a drying agent, filler, and functional additive in construction materials, chemicals, pharmaceuticals, and industrial processing applications.

The industrial chain of Anhydrous Calcium Sulfate includes upstream sources such as natural anhydrite minerals and gypsum, along with energy and processing aids. The midstream focuses on calcination, dehydration control, milling, and grading. Downstream applications cover construction materials, cement additives, desiccants, chemical processing, pharmaceuticals, food additives, and industrial fillers, supported by packaging, quality control, and logistics services.

The anhydrous calcium sulfate market is driven by stable demand from construction,

chemical processing, and industrial drying applications. Its low cost, stable performance, and multifunctional properties support widespread use as a filler and desiccant. Growth is supported by infrastructure development, cement production, and increasing demand for moisture control materials in industrial processes. Manufacturers are focusing on purity control, particle size optimization, and application-specific grades. Overall, the market is expected to maintain steady growth aligned with industrial production and construction activity.
