Antimicrobials are substances that kill or inhibit the majority of germs. The antimicrobials can be natural, semi-synthetic, or synthetic. Antibiotics are all antimicrobials, but antimicrobials aren't all antibiotics. Antibiotics are basically used to treat clinical illness, prevent and manage common disease occurrences, and improve animal development and growth. They are used in food animals in three ways: therapeutic, prophylactic, and sub-therapeutic. Antimicrobials offer significant advantages in terms of animal and human food safety. Antibiotics and antimicrobials used in animals can contribute to the spread of antimicrobial resistance in bacteria that can be transmitted to people, reducing the efficacy of antimicrobial medications for treating human illnesses.
