Animal biotechnology refers to the branch of biotechnology, which deals with the molecular biology techniques for producing genetically engineered animals (whose genome are modified), in order to make them suitable for pharmaceutical, industrial or agricultural applications. The genetically modified animals have improved growth rates, synthesized therapeutic proteins, and are resistant to various diseases. Increasing R&D by the major market players, rising regulatory approvals, and the rising focus toward cloning and transgenic animals are contributing to the market growth. However, high cost of research and development, and the ethical issues associated with animal biotechnology products may adversely affect the market growth.

The global Animal Biotechnology market size is projected to grow from US\$ million in 2023 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
