The global Animal Cell Cultured Meat market size is predicted to grow from US\$ 165 million in 2025 to US\$ 536 million in 2032; it is expected to grow at a CAGR of 18.7% from 2026 to 2032.

Animal cell cultured meat, also known as cell-based meat, lab-grown meat, or clean meat, is a type of meat that is produced by culturing animal cells in a lab instead of raising and slaughtering whole animals. The process begins by obtaining a small sample of animal cells, usually from muscle tissue, and then growing these cells in a nutrient-rich environment that simulates the conditions in the animal's body. Over time, the cells multiply and differentiate into muscle fibers, eventually forming a piece of meat that can be harvested and processed.

Pet medical care is the second largest segment in pet industry. In the UK, annual spending on veterinary and other pet services has risen from ?2.6bn in 2015 to ?4bn in 2021, a 54% increase in just six years. According to Vetnosis, the value of the global animal health industry will increase by 12% to \$38.3 billion in 2021. White Paper on China's Pet Healthy Consumption of JD shows that in 2023, there are 13.09 million pets entering middle age and old age. And pet aging is expected to be seen in the next few years.
