Electronic stimulation has become more common in the past few years in the rehabilitation of horses, cats, dogs, and other animals for the treatment of various conditions particularly related to muscles and tendons. Electrical muscle stimulation is used to treat muscle spasm, muscle atrophy, pain, joint swelling, fractures, tendon strains, muscle strains, and circulatory disorders. These devices are used to apply electric stimulation to muscles for rehabilitation purpose. Electrodes are placed to facilitate muscle contractions of a specific muscle or muscle group. A pet that is unable to begin use of its limb immediately for various reasons could be prescribed several sessions of electric stimulation. A gentle electrical current stimulates the nerves and muscles and helps to maintain muscle mass during the period of time in which they are unable to use their limb.
