The global Animal Heat Lamp market size is predicted to grow from US\$ 422 million in 2025 to US\$ 556 million in 2032; it is expected to grow at a CAGR of 4.1% from 2026 to 2032.

Animal heating lamp is a special device that provides local heat source for animals through infrared radiation or thermal radiation principle. Its core function is to directly heat the animal surface and surrounding environment through the infrared band in the electromagnetic spectrum (mainly medium-wave infrared, wavelength 2.5-4 μ m), simulate the thermal effect of natural sunlight, and realize non-contact heating. The device usually uses quartz glass or special ceramics as the radiator, and embeds high-resistance alloy (such as nickel-chromium wire) or carbon fiber heating elements inside. It converts electrical energy into thermal energy and radiates in a directional manner to avoid the problems of air disturbance and humidity drop caused by traditional convection heating. Its design needs to take into account the behavioral needs of animals (such as cubs curling up for warmth and reptiles basking habits) and physiological safety thresholds (such as avoiding high temperature burns or heat stress). The radiation intensity and wavelength distribution need to match the surface area, metabolic rate and habitat of the target animal (such as incubators, reptile breeding boxes, and livestock delivery rooms).

Today, the animal heating lamp industry is in a rapid development stage, mainly benefiting from the large-scale transformation of animal husbandry and the improvement of consumers' requirements for breeding environment. The current industry is showing the characteristics of accelerated technological iteration. LED light sources have become the mainstream due to their advantages of 40% energy saving and long life. At the same time, new materials and intelligent technologies such as graphene heating film and IoT temperature control system have promoted product upgrades. For example, functions such as precise temperature control to $\pm 1^\circ$ and

support for remote temperature adjustment by mobile phone have been commercialized.
