Animal Laser Therapy Device refers to medical laser devices designed for veterinary clinical use, using laser energy to deliver photobiomodulation, low-level laser therapy, or high-power therapeutic irradiation to animals. These devices are mainly used for pain relief, inflammation reduction, wound healing, tissue repair, post-surgical recovery, musculoskeletal rehabilitation, dermatology treatment, oral disease management, and equine or large-animal therapy.

Animal Laser Therapy Device boasts unique advantages such as being non-invasive, painless, precise, efficient, safe, and without side effects. Leveraging multi-wavelength adaptation, deep tissue penetration, and photobiological stimulation, it can simultaneously address soft tissue repair, anti-inflammatory and analgesic effects, wound healing, and minimally invasive treatment for pets, livestock, and special animals. It also features convenient operation, short recovery time, and low infection risk, perfectly meeting the core needs of modern veterinary medicine for low damage, high precision, and rapid recovery. It is a revolutionary diagnostic and treatment tool that replaces traditional drug and surgical therapies.

The core upstream components of Animal Laser Therapy Device mainly include laser source modules, laser fibers, handpieces/probes, drivers, and controllers. Typical

suppliers include Coherent, Lumentum, Heraeus Covantics, Thorlabs, Texas Instruments, Analog Devices, Infineon, STMicroelectronics, etc. The downstream applications are mainly in the repair of soft tissue injuries, anti-inflammatory and analgesic effects, wound healing, dermatopathology, and minimally invasive surgical treatments in animals such as cats, dogs, and horses.

The single-line capacity of Animal Laser Therapy Device varies significantly due to differences in automation levels, power ranges, and quality control standards. Industry gross margins typically range from 30% to 40%.
